BEST AVAILABLE IMAGES

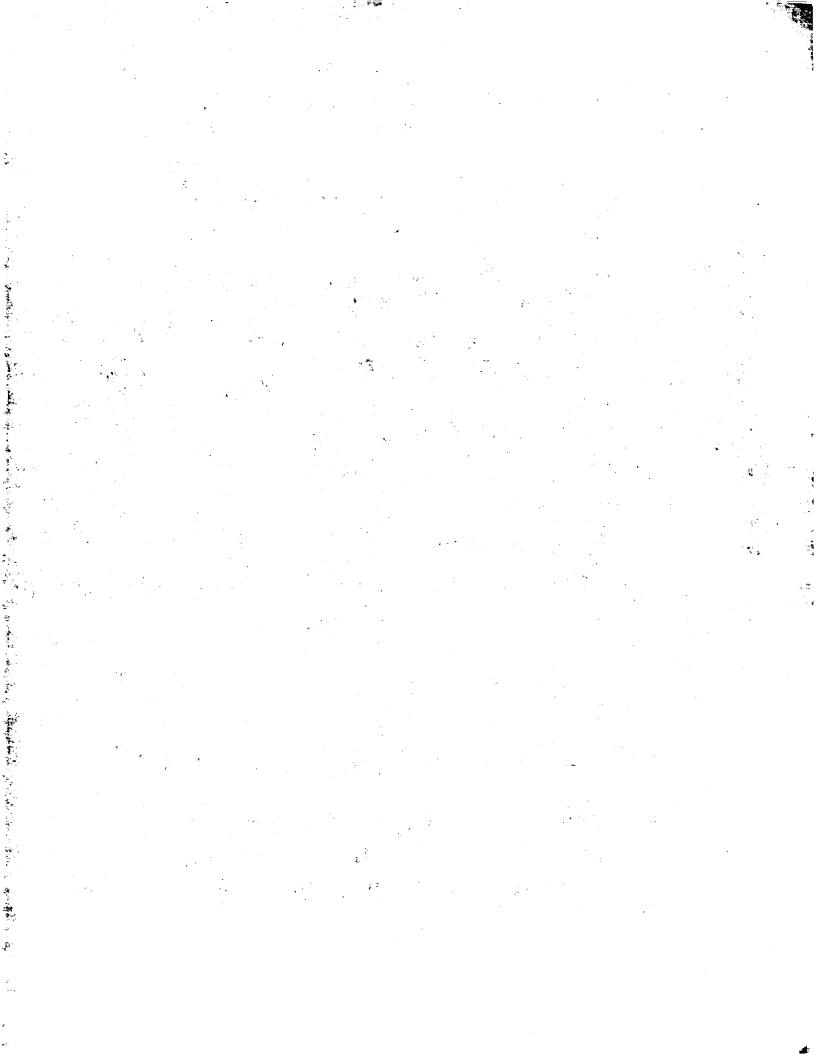

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

J. IMAGES ARE BEST AVAILABLE COPY.

As rescanning documents will not correct images, please do not report the images to the Image Problem Mailbox.

Sequence search request for 09/262,126

From: Manjunath N. Rao

Art Unit 1652, Room 10D04

Phone: 306-5681

Date: 4-18-01

Please search the following as soon as possible for application with serial number 09/262,126

SEQ ID NO:. 1 against all nucleic acid databases including issued patents database and pending application database and provide a print of all results.

SEQ ID NO: 2-4 against all protein databases including issued patents database and pending application database. and provide a print of all results.

If you have any questions please call me at the above phone number.

Thanks

Manjunath N. Rao Art Unit 1652 Room CM1, 10D04 Phone 306-5681

This search was run on the machines we identify as Compugen1, abss03, abss04, or abss05. The databases on these machines are exactly the same as those on the other machines. However, for searches run on the listed machines, two sets of results are now generated when the Pending Nucleic Acid and/or Pending Amino Acid databases are searched. The Pending databases have been split into two parts to reduce the amount of time required for their daily update.

Searches run against the Nucleic Acid Pending database will produce two sets of results, with the extensions .rnpm

Searches run against the Amino Acid Pending database will produce two sets of results, with the extensions .rapm and .rapn

Because they contain data that is confidential, the results of Pending database searches should not be left in the case.

                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents Bacillus deramificans strain CC crezyme has a pl of 4.1-4.5, has a half-life of about 55 hr at 60 deg C and is capable of catalysing the hydrolysis of CC alpha-1,6-glucosidic bonds in amylopectin and pullulan. The CC invention relates to the discovery that B. deramificans pullulanase recombinantly produced in a Bacillus host is modified yet retains CC the ability to catalyse the hydrolysis of an alpha-1,6-glucosidic bond. The modification of the recombinant pullulanase appears to the ability to catalyse the hydrolysis of an alpha-1,6-glucosidic CC bond. The modification of the recombinant pullulanase appears to the sability to catalyse the hydrolysis of an alpha-1,6-glucosidic CC processing. The invention provides modified pullulanases, for ccombinant production. The modified pullulanases are useful in CC processing. The invention provides modified pullulanases are useful in CC combinant production. The modified pullulanases are useful in CC the starch industry for the saccharification of aqueous liquefied the starch industry for the saccharification of aqueous liquefied cuses (not claimed) are: as anti-staling additives in bread; in the preparation of oligosaccharides from maltose; to condense mono- or oligosaccharides; in the preparation of oligosaccharides from amplopectin or of tetraholosides from maltose; to condense mono- or oligosaccharides, cc or in the pharmaceutical industry (no details). When used for ceversion reaction products. When used with glucose reduce the amounts of by-products, especially they provide higher glucose cc cuse possible a higher level of dissolved solids in the material cc energy-efficient process.

The pullulanse hydrolyses the alpha-1.6-glycosidic bonds of amylopectin and of pullulan. The enzyme can be used (with glucoamylase) for saccharification of starch. Typical applications include use as anti-staling additives in bread making and brewing, in preparation of low calorie foods and to clarify fruit juices.

                                                                                                                                              This sequence codes for the mature pullulanase enzyme isolated from Bacillus deramificans 7 89.117D. The pullulanase hydrolyses the alpha-1.6-glycosidic bonds of amylopectin and of pullulan. The enzyme can be used (with glucoamylase) for saccharification of starch. Typical applications include use as anti-staling additives in bread making and brewing, in preparation of low calorie foods and to clarify fruit juices.

```
The present sequence encodes a trimmed enzyme isolated from Bacillus sp. APC-9603. The present specification also describes: (1) a vector containing the DNA encoding a trimmed enzyme; (2) a recombinant microbe transformed by the DNA; and (3) preparation of a trimmed enzyme in which the microbe of (2) is cultured and the trimmed enzyme is collected from the culture. The method can prepare a trimmed enzyme of wide substrate specificity having heat resistance and being active in acid region efficiently.
                                                                                                                                                                                                                                           Claim

                                                                                                                                                                                                                                                                                                         Ъ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC This sequence represents a pullulanase nucleotide sequence. Pullulanases CC are debranching enzymes which can attack amylopectin. This sequence CC represents a parent enzyme from which genetically engineered variant CC debranching enzymes can be created. The genetically engineered to the CC an improved thermostability at a pH in the range of 4-6 compared to the CC parent enzyme. The modified enzyme may alternatively or also have an CC increased activity towards amylopectin and or glycogen compared to the CC parent enzyme. The enzyme variants are useful for converting starch to one CC or more sugars. This is useful when starches such as corn, potato, wheat, CC manioc and rice starch are used as starting materials in commercial CC large scale production of sugars, such as high fructose syrup, high CC maltose syrup, maltodextrins, amylose, G4-G6 oligosaccharides and other CC carbohydrates such as fat replacers. The thermostable debranching enzymes CC of the invention make it possible to perform liquefaction and debranching cc simultaneously before the saccharification step. By debranching using the thermostable debranching enzyme variants during liquefaction together colls reduced thereby reducing the pance content in the final product and CC is reduced thereby reducing the pance content in the final product and CC is reduced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

No. 174037/88) was cleaved by various restriction enzymes and inserted into plasmid pVI18/119. Single-stranded DNA was prepd. using helper phage M13K07 and the base sequence determined by the dideoxy method.
                                                                                                                                                                                                                                     1351

The enzyme or its encoding nucleic acid sequence is used for generating glucose from soluble oligosaccharides. The enzyme can be used in the food processing, pharmaceutical, textile, detergent and baking industries. The enzyme is also used to treat lactose intolerance, as a diagnostic reporter molecule, in corn wet milling or in the fruit juice adjusted to the control of the control

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1163
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1046
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        industry. The enzymes can be used to hydrolyse guar gum to remove non-reducing terminal mannose residues. The nucleic acids encoding the enzyme may be used to generate probes to identify similar sequences.

CC The present invention describes a computer readable medium which has CC the nucleotide sequences SEQ ID NO:1 to 391 (VS2134 to V52524) recorded CC on it, or a representative fragment or a sequence at least 95% identical CC SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The nucleotide sequences depicted in SEQ ID NO:1 to 391. The present invention also describes an isolated nucleic acid molecule encoding a homologue of any of the fragments of the S.pneumoniae GEQ ID NO:1 to 391) where the nucleic acid molecule is produced by a process comprising: (a) screening a genomic DNA library using as a CC probe a target sequence defined by any of the sequences in SEQ ID NO:1 to 391, identifying members of the library which contain sequences that hybridise to the target sequence and isolating the nucleic acid molecules from the members; or (b) isolating mRNA, DNA or CDNA produced CC from an organism, amplifying nucleic acid molecules whose nucleotide CC sequence is homologous to amplification primers derived from the sequences of the S. pneumoniae genome to prime the amplification and CC isolating the amplified sequences. The computer readable medium can be used in a computer-based system for identifying fragments of the S. pneumoniae genome. Products from the present CC invention can be used in diagnosis kits and assays, and pharmaceutical compositions and vaccines for S. pneumoniae.
